Experience

Software Engineer, Anvento IT Labs, India

August 2026 – Present

- Ship end-to-end features for a production web platform supporting widows, owning work across the full stack (React, JavaScript, Python, PostgreSQL) from requirements to deployment.
- Partner directly with US-based clients to translate ambiguous business requirements into technical specs, driving feature prioritization and scoping conversations independently.
- Build and maintain React and JavaScript frontend components alongside Python backend services, working with a PostgreSQL database hosted on AWS to handle UI logic and data persistence.
- Drive code quality through active participation in code reviews and debugging, resolving production issues/bugs and improving platform stability.

SDE Intern, Apple, India

January 2026 – June 2026

- Built a centralized insights platform as a POC, consolidating data from **3 teams / 3 sources** into a unified ingestion pipeline, using LLM-based field mapping to automate schema normalization — designed to onboard additional teams/sources with minimal reconfiguration.
- Designed an OpenSearch-based subscription matching system supporting multi-topic subscriptions, with notifications triggered within seconds of ingestion — tested against sample data ahead of full-scale rollout.
- Containerized **7 microservices** (ingestion, enrichment, subscription matching, and supporting services) with Docker, enabling consistent environment setup across streaming and batch-processing workflows and eliminating "works on my machine" environment inconsistencies during development.

Associate Digital Engineer Intern, TVS Motor Company, India

June 2025 – July 2025

- Built an end-to-end RAG chatbot using LangChain and LangGraph, with conditional routing logic across 3 document sources and multiple query sub-types to direct each query to the correct retrieval path.
- Integrated local LLMs with semantic chunking and FAISS-based retrieval, improving retrieval quality over naive fixed-size chunking by preserving contextual coherence across chunks.
- Developed Chainlit UI with FastAPI backend; improved response time by **60%** and accuracy by **35%**.

Education

Thapar Institute of Engineering and Technology, Patiala, BE in Computer Science

August 2022 – June 2026

- GPA: 8.88/10

Skills Summary

Generative AI & LLM Systems:	LangChain, LangGraph, RAG, Prompt Engineering, FAISS
Programming Languages:	Python, SQL, C++, JavaScript
Backend & Infrastructure:	Docker, FastAPI, RestAPIs, MongoDB, PostgreSQL, OpenSearch, Git
Machine Learning & Data:	Scikit-Learn, NLTK, Pandas, NumPy, Matplotlib, Seaborn, PySpark
Web:	HTML, CSS
Relevant Coursework:	Data Structures & Algorithms, Statistics, Operating Systems, Database Management Systems, Probability & Statistics, Linear Algebra

Projects

Medibot | Python, FastAPI, Streamlit, Mistral LLM, OpenAI API, NLTK

[GitHub](#)

- Built an interactive medical chatbot handling a range of predefined medical query intents, using intent classification with Mistral LLM fallback for queries outside the trained intent set.
- Built with FastAPI backend and Streamlit frontend, running locally end-to-end.

Face Anonymization Tool | Python, OpenCV, MediaPipe, FastAPI, HTML, CSS, JavaScript

[GitHub](#)

- Built a full-stack privacy tool detecting and anonymizing faces in real-time across images, videos, and webcam streams, using MediaPipe for detection and OpenCV for processing.
- Implemented 4 anonymization modes (blur, pixelate, blackout, emoji) with live preview and instant toggling, built with a FastAPI backend and HTML/JS/CSS frontend.
